

OUTDOOR SET UP INSTRUCTIONS & OPTIONS

There are many choices to setup these unique hand carved granite outdoor fountains. They may be used indoor or outdoor and you can be creative as to what type of basin you want to implement.

- :: Some of the fountains come in packages including; pump, liner, tubing, drilling, etc.
- :: Some do not.(please refer to description and options)
- :: You may want to purchase a redwood or black granite catch basin. (see accessories)
- :: You may want to give the visual effect of the fountain coming out of the ground. (choose a pkg. or see accessories for pump, tubing, liner, etc.)
- :: Have a mason create a concrete form for reservoir

Want to do it yourself?

We are a phone call away to tell you what you need. It is fun and fairly simple.

We have provided a outdoor fountain setup diagram to assist you using the liner technique, which gives the visual effect of the fountain coming out of the ground. (See below)

- :: Fountain accessories(redwood or granite catchbasin, optional base stone)
- :: Outdoor Setup Diagram (download pdf)

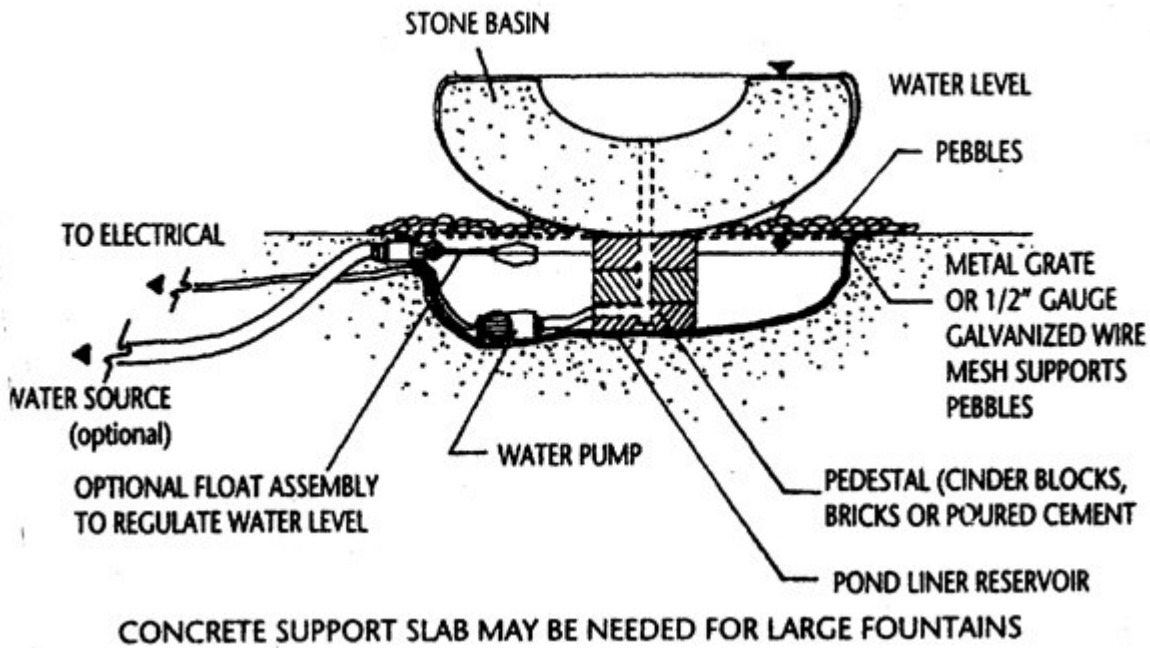

Setup Instructions #1

(using liner technique)

- 1 Locate a visually appealing site for the fountain
- 2 Have an electrical source installed or integrate a source you already have close by. (standard 110v, 3 prong grounded)
- 3 You can integrate an incoming water source with a water float to maintain a constant water level or simply refill reservoir as necessary. (There will be a loss of performance or the pump gurgling or hissing when there is a lack of water)
- 4 Dig a hole approximately 1 ft deep or more. (You may dig hole depth less, but will have to refill more often unless you have incoming water source and water float) Make sure center is as level as possible for support pedestal.
- 5 Dig perimeter 1 ft or more past the diameter of your fountain.
- 6 Lay liner in hole overlapping past the perimeter of top edge of hole by 6" or more.
- 7 Put pedestal(cinder blocks, bricks or poured cement) in center of hole. Make sure there is a gap, crack, etc. in order to run the tubing from the pump up through the fountain and make sure top of pedestal is level with ground. (can be up to an 1 in. or more higher than ground level to accommodate for settling)
- 8 Cut metal grate or chicken wire to extend past the circumference of hole 6 inches or more as you did with liner above.
- 9 Place fountain in center of pedestal. Use level on top edge of fountain to ensure level. Use shims or any other material inserted between bottom of fountain and top of pedestal to make level.
- 10 Run tubing through fountain and pedestal and connect to pump.
- 11 Cover grate/chicken wire with pebbles, stone, etc.
- 12 Fill with water. We recommend about 2-4 inches below grate/chicken wire for a good sound.
- 13 Plug in...Adjust pump to taste
- 14 ENJOY!
